

Goat Growth Differentiation Factor 9 ELISA Kit | GDF9 elisa kit

Goat Growth Differentiation Factor 9 ELISA Kit

CATALOG #
AAA93279

REACTIVITY
Goat

PRODUCT SYNONYMS

Growth Differentiation Factor 9; Goat Growth Differentiation Factor 9 ELISA Kit; GDF9 elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Goat
Specificity	This assay has high sensitivity and excellent specificity for detection of GDF9. No significant cross-reactivity or interference between GDF9 and analogues was observed. NOTE: Limited by current skills and knowledge, it is impossible for us to complete the cross-reactivity detection between GDF9 and all the analogues, therefore, cross reaction may still exist in some cases.
Assay Type	Quantitative Competitive
Samples	Serum, plasma, cell culture supernatants, body fluid and tissue homogenate
Sensitivity	0.1 ng/ml
Intended Uses	This GDF9 ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Goat GDF9. This ELISA kit for research use only, not for therapeutic applications!
Preparation and Storage	Store all reagents at 2-8 degree C.

ADDITIONAL INFORMATION

Related Product Information for GDF9 elisa kit	Principle of the Assay: GDF9 ELISA kit applies the competitive enzyme immunoassay technique utilizing a polyclonal anti-GDF9 antibody and an GDF9-HRP conjugate. The assay sample and buffer are incubated together with GDF9-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the GDF9 concentration since GDF9 from samples and GDF9-HRP conjugate compete for the anti-GDF9 antibody binding site. Since the number of sites is limited, as more sites are occupied by GDF9 from the sample, fewer sites are left to bind GDF9-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The GDF9 concentration in each sample is interpolated from this standard curve. Intended Uses: This GDF9 ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Goat GDF9. This ELISA kit for research use only, not for therapeutic or test applications!
