

Goat Pentosidine ELISA Kit

Goat Pentosidine ELISA Kit

CATALOG #
AAA93284

REACTIVITY
Goat

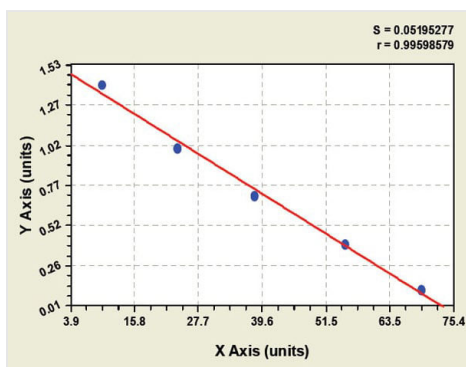

PRODUCT SYNONYMS

Pentosidine; Goat Pentosidine ELISA Kit; Pentosidine elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Goat
Samples	Serum, plasma, Cell Culture Supernatants, body fluid and tissue homogenate
Assay Type	Competitive
Sensitivity	0.1 ng/mL.
Intended Uses	This PENTOSIDINE ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Goat PENTOSIDINE. This ELISA kit for research use only, not for therapeutic applications
Preparation and Storage	Store all reagents at 2-8 degree C

ADDITIONAL INFORMATION

Related Product Information for Pentosidine elisa kit

Principle of the Assay: PENTOSIDINE ELISA kit applies the competitive enzyme immunoassay technique utilizing a monoclonal anti-PENTOSIDINE antibody and an PENTOSIDINE-HRP conjugate. The assay sample and buffer are incubated together with PENTOSIDINE-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the PENTOSIDINE concentration since PENTOSIDINE from samples and PENTOSIDINE-HRP conjugate compete for the anti-PENTOSIDINE antibody binding site. Since the number of sites is limited, as more sites are occupied by PENTOSIDINE from the sample, fewer sites are left to bind PENTOSIDINE-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The PENTOSIDINE concentration in each sample is interpolated from this standard curve.

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
