

Monkey CD5 Antigen-like/scavenger receptor cysteine rich family ELISA Kit | CD5L elisa kit

Monkey CD5 Antigen-like/scavenger receptor cysteine rich family ELISA Kit

CATALOG #
AAA93382

REACTIVITY
Monkey

PRODUCT SYNONYMS

CD5 Antigen-like/scavenger receptor cysteine rich family; Monkey CD5 Antigen-like/scavenger receptor cysteine rich family ELISA Kit; CD5L elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Monkey
Samples	Serum, plasma, Cell Culture Supernatants, body fluid and tissue homogenate
Assay Type	Competitive
Detection Range	1.0-25ng/mL
Sensitivity	0.1ng/mL
Intended Uses	This KL ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Human KL. This ELISA kit for research use only, not for therapeutic applications!
Preparation and Storage	Store all reagents at 2-8 degree C.

Principle of the Assay: KL ELISA kit applies the competitive enzyme immunoassay technique utilizing a monoclonal anti-KL antibody and an KL-HRP conjugate. The assay sample and buffer are incubated together with KL-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the KL concentration since KL from samples and KL-HRP conjugate compete for the anti-KL antibody binding site. Since the number of sites is limited, as more sites are occupied by KL from the sample, fewer sites are left to bind KL-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The KL concentration in each sample is interpolated from this standard curve.
