

## Sheep Procollagen Type I N-Terminal Propeptide ELISA Kit | PINP elisa kit

Sheep Procollagen Type I N-Terminal Propeptide ELISA Kit

CATALOG #  
**AAA93448**

REACTIVITY  
**Sheep**

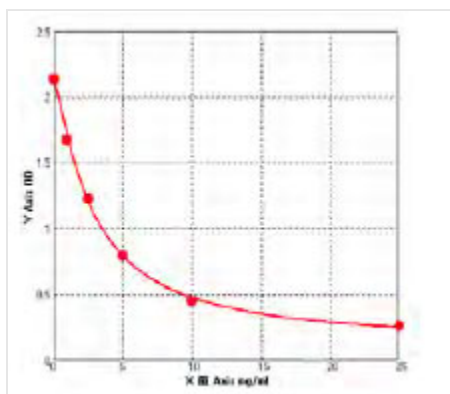

### PRODUCT SYNONYMS

Procollagen Type I N-Terminal Propeptide; Sheep Procollagen Type I N-Terminal Propeptide ELISA Kit; PINP elisa kit

### PRODUCT SPECIFICATIONS

|                         |                                                                            |
|-------------------------|----------------------------------------------------------------------------|
| Reactivity              | Sheep                                                                      |
| Samples                 | Serum, plasma, cell culture supernatants, body fluid and tissue homogenate |
| Assay Type              | Quantitative Competitive                                                   |
| Sensitivity             | 0.1 ng/mL.                                                                 |
| Preparation and Storage | Store all reagents at 2-8 degree C.                                        |

### ADDITIONAL INFORMATION

#### Related Product Information for PINP elisa kit

**Intended Uses:** This PINP ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Sheep PINP. This ELISA kit for research use only!

**Principle of the Assay:** PINP ELISA kit applies the competitive enzyme immunoassay technique utilizing a polyclonal anti-PINP antibody and an PINP-HRP conjugate. The assay sample and buffer are incubated together with PINP-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the PINP concentration since PINP from samples and PINP-HRP conjugate compete for the anti-PINP antibody binding site. Since the number of sites is limited, as more sites are occupied by PINP from the sample, fewer sites are left to bind PINP-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The PINP concentration in each sample is interpolated from this standard curve.

**For Research Use Only.** Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
