

Goat Salusin alpha ELISA Kit

Goat Salusin alpha ELISA Kit

CATALOG #
AAA93466

REACTIVITY
Goat

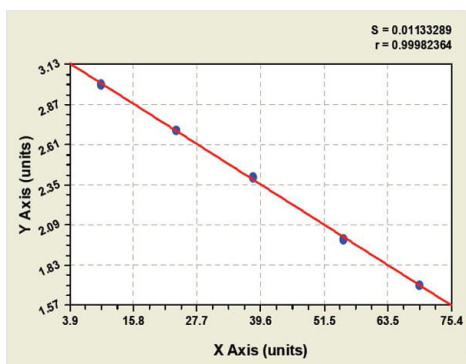

PRODUCT SYNONYMS

Salusin alpha; Goat Salusin alpha ELISA Kit; Salusin alpha elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Goat
Samples	Serum, plasma, Cell Culture Supernatants, body fluid and tissue homogenate
Assay Type	Competitive
Sensitivity	1.0 pg/mL.
Intended Uses	This Salusin a ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Goat Salusin a. This ELISA kit for research use only, not for therapeutic applications!
Preparation and Storage	Store all reagents at 2-8 degree C

ADDITIONAL INFORMATION

Related Product Information for Salusin alpha elisa kit

Principle of the Assay: Salusin a ELISA kit applies the competitive enzyme immunoassay technique utilizing a monoclonal anti-Salusin a antibody and an Salusin a-HRP conjugate. The assay sample and buffer are incubated together with Salusin a-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the Salusin a concentration since Salusin a from samples and Salusin a-HRP conjugate compete for the anti-Salusin a antibody binding site. Since the number of sites is limited, as more sites are occupied by Salusin a from the sample, fewer sites are left to bind Salusin a-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The Salusin a concentration in each sample is interpolated from this standard curve.

Product Categories/Family for Salusin alpha elisa kit

Cardiovascular

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
