

Goat Neurotrophin-1 ELISA Kit | NT-1 elisa kit

Goat Neurotrophin-1 ELISA Kit

CATALOG #
AAA93501

REACTIVITY
Goat

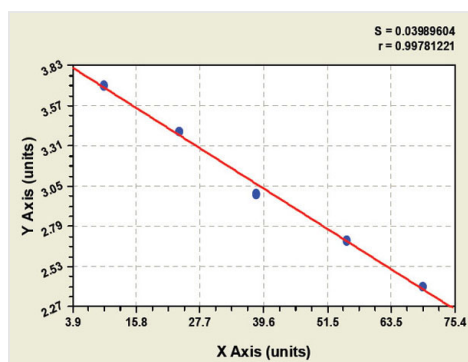

PRODUCT SYNONYMS

Neurotrophin-1; Goat Neurotrophin-1 ELISA Kit; NT-1 elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Goat
Samples	Serum, plasma, Cell Culture Supernatants, body fluid and tissue homogenate
Assay Type	Competitive
Sensitivity	1.0 pg/mL.
Preparation and Storage	Store all reagents at 2-8 degree C

Related Product Information for NT-1 elisa kit

Intended Uses: This NT-1 ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Goat NT-1. This ELISA kit for research use only!

Principle of the Assay: NT-1 ELISA kit applies the competitive enzyme immunoassay technique utilizing a monoclonal anti-NT-1 antibody and an NT-1-HRP conjugate. The assay sample and buffer are incubated together with NT-1-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the NT-1 concentration since NT-1 from samples and NT-1-HRP conjugate compete for the anti-NT-1 antibody binding site. Since the number of sites is limited, as more sites are occupied by NT-1 from the sample, fewer sites are left to bind NT-1-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The NT-1 concentration in each sample is interpolated from this standard curve.
