

Chicken Apotransferrin ELISA Kit | ApoTf elisa kit

Chicken Apotransferrin ELISA Kit

CATALOG #
AAA93589

REACTIVITY
Chicken

PRODUCT SYNONYMS

Apotransferrin; Chicken Apotransferrin ELISA Kit; ApoTf elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Chicken
Samples	Serum, plasma, Cell Culture Supernatants, body fluid and tissue homogenate
Assay Type	Competitive
Sensitivity	0.1 ng/mL.
Preparation and Storage	Store all reagents at 2-8 degree C.

ADDITIONAL INFORMATION

Related Product Information for ApoTf elisa kit
Intended Uses: This ApoTf ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Chicken ApoTf. This ELISA kit for research use only!

Principle of the Assay: ApoTf ELISA kit applies the competitive enzyme immunoassay technique utilizing a monoclonal anti-ApoTf antibody and an ApoTf-HRP conjugate. The assay sample and buffer are incubated together with ApoTf-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the ApoTf concentration since ApoTf from samples and ApoTf-HRP conjugate compete for the anti-ApoTf antibody binding site. Since the number of sites is limited, as more sites are occupied by ApoTf from the sample, fewer sites are left to bind ApoTf-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The ApoTf concentration in each sample is interpolated from this standard curve.

Product Categories/Family for ApoTf elisa kit

Cardiovascular

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
