

Sheep Hydroxyproline ELISA Kit | HYP elisa kit

Sheep Hydroxyproline ELISA Kit

CATALOG #
AAA93590

REACTIVITY
Sheep

PRODUCT SYNONYMS

Hydroxyproline; Sheep Hydroxyproline ELISA Kit; HYP elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Sheep
Samples	Serum, plasma, Cell Culture Supernatants, body fluid and tissue homogenate
Assay Type	Competitive
Sensitivity	1.0 nmol/L.
Preparation and Storage	Store all reagents at 2-8 degree C.

Related Product Information for HYP elisa kit

Intended Uses: This HYP ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Sheep HYP. This ELISA kit for research use only!

Principle of the Assay: HYP ELISA kit applies the competitive enzyme immunoassay technique utilizing a monoclonal anti-HYP antibody and an HYP-HRP conjugate. The assay sample and buffer are incubated together with HYP-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the HYP concentration since HYP from samples and HYP-HRP conjugate compete for the anti-HYP antibody binding site. Since the number of sites is limited, as more sites are occupied by HYP from the sample, fewer sites are left to bind HYP-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The HYP concentration in each sample is interpolated from this standard curve.
