

Rat Paraoxonase 1 ELISA Kit | PON-1 elisa kit

Rat Paraoxonase 1 ELISA Kit

CATALOG #
AAA93735

REACTIVITY
Rat

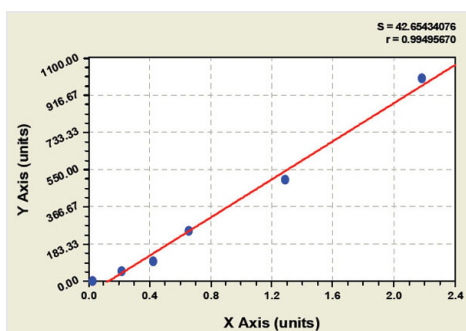

PRODUCT SYNONYMS

Paraoxonase 1; Rat Paraoxonase 1 ELISA Kit; PON-1 elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Rat
Samples	Serum, plasma, Cell Culture Supernatants, body fluid and tissue homogenate
Assay Type	Sandwich
Sensitivity	1.0 pg/mL.
Preparation and Storage	Store all reagents at 2-8 degree C.

For samples: Serum, plasma, cell culture supernatants, body fluid and tissue homogenate

INTENDED USE This pro NGF ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Rat pro NGF. This ELISA kit for research use only!

PRINCIPLE OF THE ASSAY pro NGF ELISA kit applies the quantitative sandwich enzyme immunoassay technique. The microtiter plate has been pre-coated with a monoclonal antibody specific for pro NGF. Standards or samples are then added to the microtiter plate wells and pro NGF if present, will bind to the antibody pre-coated wells. In order to quantitatively determine the amount of pro NGF present in the sample, a standardized preparation of horseradish peroxidase (HRP)-conjugated polyclonal antibody, specific for pro NGF are added to each well to "sandwich" the pro NGF immobilized on the plate. The microtiter plate undergoes incubation, and then the wells are thoroughly washed to remove all unbound components. Next, substrate solutions are added to each well. The enzyme (HRP) and substrate are allowed to react over a short incubation period. Only those wells that contain pro NGF and enzyme-conjugated antibody will exhibit a change in color. The enzyme-substrate reaction is terminated by addition of a sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450 nm. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The pro NGF concentration in each sample is interpolated from this standard curve.
