Related Product Information for ULBP3 elisa kit	For samples: Serum, plasma, cell culture supernatants, body fluid and tissue homogenate INTENDED USE This ULBP3 ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Human ULBP3. This ELISA kit for research use only! PRINCIPLE OF THE ASSAY ULBP3 ELISA kit applies the competitive enzyme immunoassay technique utilizing a monoclonal anti-ULBP3 antibody and an ULBP3-HRP conjugate. The assay sample and buffer are incubated together with ULBP3-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the ULBP3 concentration since ULBP3 from samples and ULBP3-HRP conjugate compete for the anti-ULBP3 antibody binding site. Since the number of sites is limited, as more sites are occupied by ULBP3 from the sample, fewer sites are left to bind ULBP3-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The ULBP3 concentration in each sample is interpolated from this standard curve.
