

Monkey Bone morphogenetic proteins ELISA Kit | BMPs elisa kit

Monkey Bone morphogenetic proteins ELISA Kit

CATALOG #
AAA93877

REACTIVITY
Monkey

PRODUCT SYNONYMS

Bone morphogenetic proteins; Monkey Bone morphogenetic proteins ELISA Kit; BMPs elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Monkey
Samples	Serum, plasma, Cell Culture Supernatants, body fluid and tissue homogenate
Assay Type	Competitive
Sensitivity	0.1 ng/mL.
Preparation and Storage	Store all reagents at 2-8 degree C

Intended Uses: This BMPs ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Monkey BMPs. This ELISA kit for research use only!

Principle of the Assay: BMPs ELISA kit applies the competitive enzyme immunoassay technique utilizing a monoclonal anti-BMPs antibody and an BMPs-HRP conjugate. The assay sample and buffer are incubated together with BMPs-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the BMPs concentration since BMPs from samples and BMPs-HRP conjugate compete for the anti-BMPs antibody binding site. Since the number of sites is limited, as more sites are occupied by BMPs from the sample, fewer sites are left to bind BMPs-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The BMPs concentration in each sample is interpolated from this standard curve.
