

Monkey High density lipoprotein cholesterol ELISA Kit | HDL-C elisa kit

Monkey High density lipoprotein cholesterol ELISA Kit

CATALOG #
AAA93917

REACTIVITY
Monkey

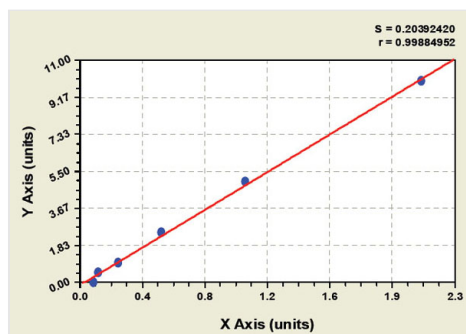

PRODUCT SYNONYMS

High density lipoprotein cholesterol; Monkey High density lipoprotein cholesterol ELISA Kit; HDL-C elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Monkey
Samples	Serum, plasma, Cell Culture Supernatants, body fluid and tissue homogenate
Assay Type	Competitive
Detection Range	100 nmoL/mL
Sensitivity	1.0 nmoL/mL
Intended Uses	This HDL-C ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Monkey HDL-C. This ELISA kit for research use only, not for therapeutic applications
Preparation and Storage	Store all reagents at 2-8 degree C.

ADDITIONAL INFORMATION

Related Product Information for HDL-C elisa kit

Principle of the Assay: HDL-C ELISA kit applies the quantitative sandwich enzyme immunoassay technique. The microtiter plate has been pre-coated with a monoclonal antibody specific for HDL-C. Standards or samples are then added to the microtiter plate wells and HDL-C if present, will bind to the antibody pre-coated wells. In order to quantitatively determine the amount of HDL-C present in the sample, a standardized preparation of horseradish peroxidase (HRP)-conjugated polyclonal antibody, specific for HDL-C are added to each well to "sandwich" the HDL-C immobilized on the plate. The microtiter plate undergoes incubation, and then the wells are thoroughly washed to remove all unbound components. Next, substrate solutions are added to each well. The enzyme (HRP) and substrate are allowed to react over a short incubation period. Only those wells that contain HDL-C and enzyme-conjugated antibody will exhibit a change in color. The enzyme-substrate reaction is terminated by addition of a sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450 nm. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The HDL-C concentration in each sample is interpolated from this standard curve.

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
