

Chicken Spermine ELISA Kit | SM elisa kit

Chicken Spermine ELISA Kit

CATALOG #
AAA94415

REACTIVITY
Chicken

PRODUCT SYNONYMS

Spermine; Chicken Spermine ELISA Kit; SM elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Chicken
Samples	Serum, plasma, Cell Culture Supernatants, body fluid and tissue homogenate
Assay Type	Competitive
Sensitivity	0.1 ?g/mL.
Intended Uses	This SM ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Chicken SM. This ELISA kit for research use only, not for therapeutic applications!
Preparation and Storage	Store all reagents at 2-8 degree C.

ADDITIONAL INFORMATION

Related Product Information for SM elisa kit

Principle of the assay: SM ELISA kit applies the competitive enzyme immunoassay technique utilizing a monoclonal anti-SM antibody and an SM-HRP conjugate. The assay sample and buffer are incubated together with SM-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the SM concentration since SM from samples and SM-HRP conjugate compete for the anti-SM antibody binding site. Since the number of sites is limited, as more sites are occupied by SM from the sample, fewer sites are left to bind SM-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The SM concentration in each sample is interpolated from this standard curve.
