

Porcine Melanoma Marker A ELISA Kit | MART/Melan-A elisa kit

Porcine Melanoma Marker A ELISA Kit

CATALOG #
AAA94422

REACTIVITY
Porcine

PRODUCT SYNONYMS

Melanoma Marker A; Porcine Melanoma Marker A ELISA Kit; MART/Melan-A elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Porcine
Samples	Serum, plasma, Cell Culture Supernatants, body fluid and tissue homogenate
Assay Type	Competitive
Sensitivity	1.0 pg/mL.
Intended Uses	This MART/Melan-A ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Porcine MART/Melan-A. This ELISA kit for research use only, not for therapeutic applications!
Preparation and Storage	Store all reagents at 2-8 degree C.

ADDITIONAL INFORMATION

Related Product Information for MART/Melan-A elisa kit

Principle of the assay: MART/Melan-A ELISA kit applies the competitive enzyme immunoassay technique utilizing a monoclonal anti-MART/Melan-A antibody and an MART/Melan-A-HRP conjugate. The assay sample and buffer are incubated together with MART/Melan-A-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the MART/Melan-A concentration since MART/Melan-A from samples and MART/Melan-A-HRP conjugate compete for the anti-MART/Melan-A antibody binding site. Since the number of sites is limited, as more sites are occupied by MART/Melan-A from the sample, fewer sites are left to bind MART/Melan-A-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The MART/Melan-A concentration in each sample is interpolated from this standard curve.
