

Rat Heparin ELISA Kit | Heparin elisa kit

Rat Heparin ELISA Kit

CATALOG #
AAA94472

REACTIVITY
Rat

PRODUCT SYNONYMS

Heparin; Rat Heparin ELISA Kit; Heparin elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Rat
Specificity	This assay has high sensitivity and excellent specificity for detection of Heparin. No significant cross-reactivity or interference between Heparin and analogues was observed. NOTE: Limited by current skills and knowledge, it is impossible for us to complete the cross-reactivity detection between Heparin and all the analogues, therefore, cross reaction may still exist in some cases.
Assay Type	Quantitative Competitive
Samples	Serum, plasma, cell culture supernatants, body fluid and tissue homogenate
Sensitivity	0.1 ng/mL
Intended Uses	This Heparin ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Rat Heparin. This ELISA kit for research use only, not for therapeutic applications!
Preparation and Storage	Store all reagents at 2-8 degree C.

ADDITIONAL INFORMATION

Related Product Information for Heparin elisa kit	Principle of the Assay: Heparin ELISA kit applies the competitive enzyme immunoassay technique utilizing an anti-Heparin antibody and an Heparin-HRP conjugate. The assay sample and buffer are incubated together with Heparin-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the Heparin concentration since Heparin from samples and Heparin-HRP conjugate compete for the anti-Heparin antibody binding site. Since the number of sites is limited, as more sites are occupied by Heparin from the sample, fewer sites are left to bind Heparin-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The Heparin concentration in each sample is interpolated from this standard curve. Intended Uses: This Heparin ELISA kit is a 1.5-hour solid-phase ELISA designed for the quantitative determination of Rat Heparin. This ELISA kit for research use only, not for therapeutic or test applications!
--	---

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
