

Goat Immunoglobulin D ELISA Kit | IgD elisa kit

Goat Immunoglobulin D ELISA Kit

CATALOG #
AAA94587

REACTIVITY
Goat

PRODUCT SYNONYMS

Immunoglobulin D; Goat Immunoglobulin D ELISA Kit; IgD elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Goat
Samples	Serum, plasma, Cell Culture Supernatants, body fluid and tissue homogenate
Assay Type	Competitive
Sensitivity	1.0 ug/L.
Intended Uses	This IgD ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Goat IgD. This ELISA kit for research use only, not for therapeutic applications!
Preparation and Storage	Store all reagents at 2-8 degree C.

ADDITIONAL INFORMATION

Related Product Information for IgD elisa kit

Principle of the Assay: IgD ELISA kit applies the competitive enzyme immunoassay technique utilizing a monoclonal anti-IgD antibody and an IgD-HRP conjugate. The assay sample and buffer are incubated together with IgD-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the IgD concentration since IgD from samples and IgD-HRP conjugate compete for the anti-IgD antibody binding site. Since the number of sites is limited, as more sites are occupied by IgD from the sample, fewer sites are left to bind IgD-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The IgD concentration in each sample is interpolated from this standard curve.

NCBI AND UNIPROT INFORMATION

NCBI GI #	402238463
NCBI Official Full Name	immunoglobulin D

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
