

## Guinea Pig Nav1.7 ELISA Kit | Nav1.7 elisa kit

Guinea pig Nav1.7 ELISA Kit

CATALOG #  
**AAA94770**

REACTIVITY  
**Guinea Pig**

### PRODUCT SYNONYMS

Nav1.7; Guinea pig Nav1.7 ELISA Kit; Nav1.7 elisa kit

### PRODUCT SPECIFICATIONS

|                         |                                                                            |
|-------------------------|----------------------------------------------------------------------------|
| Reactivity              | Guinea Pig                                                                 |
| Samples                 | Serum, plasma, cell culture supernatants, body fluid and tissue homogenate |
| Assay Type              | Competitive (Quantitative)                                                 |
| Sensitivity             | 0.1 ng/ml.                                                                 |
| Preparation and Storage | Store all reagents at 2-8 degree C.                                        |

### ADDITIONAL INFORMATION

#### Related Product Information for Nav1.7 elisa kit

**Intended Uses:** This Nav1.7 ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Guinea pig Nav1.7. This ELISA kit for research use only!

**Principle of the Assay:** Nav1.7 ELISA kit applies the competitive enzyme immunoassay technique utilizing a monoclonal anti-Nav1.7 antibody and an Nav1.7-HRP conjugate. The assay sample and buffer are incubated together with Nav1.7-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the Nav1.7 concentration since Nav1.7 from samples and Nav1.7-HRP conjugate compete for the anti-Nav1.7 antibody binding site. Since the number of sites is limited, as more sites are occupied by Nav1.7 from the sample, fewer sites are left to bind Nav1.7-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The Nav1.7 concentration in each sample is interpolated from this standard curve.
