

# Chicken Lymphocyte Factor ELISA Kit | Lymphocyte Factor elisa kit

Chicken Lymphocyte Factor ELISA Kit

CATALOG #  
**AAA94809**

REACTIVITY  
**Chicken**

## PRODUCT SYNONYMS

Lymphocyte Factor; Chicken Lymphocyte Factor ELISA Kit; Lymphocyte Factor elisa kit

## PRODUCT SPECIFICATIONS

|                         |                                                                                                                                                                                      |
|-------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Reactivity              | Chicken                                                                                                                                                                              |
| Samples                 | Serum, plasma, Cell Culture Supernatants, body fluid and tissue homogenate                                                                                                           |
| Assay Type              | Competitive                                                                                                                                                                          |
| Intended Uses           | This LF ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Chicken LF. This ELISA kit for research use only, not for therapeutic applications  |
| Intended Uses           | This LF ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Chicken LF. This ELISA kit for research use only, not for therapeutic applications! |
| Preparation and Storage | Store all reagents at 2-8 degree C.                                                                                                                                                  |

## ADDITIONAL INFORMATION

### Related Product Information for Lymphocyte Factor elisa kit

**Principle of the Assay:** LF ELISA kit applies the competitive enzyme immunoassay technique utilizing a monoclonal anti-LF antibody and an LF-HRP conjugate. The assay sample and buffer are incubated together with LF-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the LF concentration since LF from samples and LF-HRP conjugate compete for the anti-LF antibody binding site. Since the number of sites is limited, as more sites are occupied by LF from the sample, fewer sites are left to bind LF-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The LF concentration in each sample is interpolated from this standard curve.

**For Research Use Only.** Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
