

Chicken Soluble P53 ELISA Kit | sP53 elisa kit

Chicken Soluble P53 ELISA Kit

CATALOG #
AAA94884

REACTIVITY
Chicken

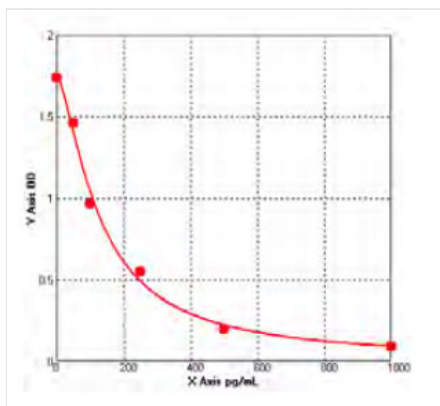

PRODUCT SYNONYMS

Soluble P53; Chicken Soluble P53 ELISA Kit; sP53 elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Chicken
Specificity	This assay has high sensitivity and excellent specificity for detection of SP53. No significant cross-reactivity or interference between SP53 and analogues was observed. NOTE: Limited by current skills and knowledge, it is impossible for us to complete the cross-reactivity detection between SP53 and all the analogues, therefore, cross reaction may still exist in some cases.
Assay Type	Quantitative Competitive
Samples	Serum, plasma, cell culture supernatants, body fluid and tissue homogenate
Sensitivity	1.0 pg/mL
Intended Uses	This sP53 ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Chicken sP53. This ELISA kit for research use only, not for therapeutic applications
Intended Uses	This sP53 ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Chicken sP53. This ELISA kit for research use only, not for therapeutic applications!
Preparation and Storage	Store all reagents at 2-8 degree C.

ADDITIONAL INFORMATION

Related Product Information for sP53 elisa kit	Principle of the Assay: SP53 ELISA kit applies the competitive enzyme immunoassay technique utilizing an anti-SP53 antibody and an SP53-HRP conjugate. The assay sample and buffer are incubated together with SP53-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the SP53 concentration since SP53 from samples and SP53-HRP conjugate compete for the anti-SP53 antibody binding site. Since the number of sites is limited, as more sites are occupied by SP53 from the sample, fewer sites are left to bind SP53-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The SP53 concentration in each sample is interpolated from this standard curve. Intended Uses: This SP53 ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Chicken SP53. This ELISA kit for research use only, not for therapeutic or test applications!
Product Categories/Family for sP53 elisa kit	Signal Transduction

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
