

Bovine Homovanillic acid ELISA Kit | HVA elisa kit

Bovine Homovanillic acid ELISA Kit

CATALOG #
AAA94985

REACTIVITY
Bovine

PRODUCT SYNONYMS

Homovanillic acid; Bovine Homovanillic acid ELISA Kit; HVA elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Bovine
Samples	Serum, plasma, Cell Culture Supernatants, body fluid and tissue homogenate
Assay Type	Competitive
Sensitivity	0.1 mg/mL
Preparation and Storage	Store all reagents at 2-8 degree C.

ADDITIONAL INFORMATION

Related Product Information for HVA elisa kit

Intended Uses: This HVA ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Bovine HVA. This ELISA kit for research use only!

Principle of the Assay: HVA ELISA kit applies the competitive enzyme immunoassay technique utilizing a monoclonal anti-HVA antibody and an HVA-HRP conjugate. The assay sample and buffer are incubated together with HVA-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the HVA concentration since HVA from samples and HVA-HRP conjugate compete for the anti-HVA antibody binding site. Since the number of sites is limited, as more sites are occupied by HVA from the sample, fewer sites are left to bind HVA-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The HVA concentration in each sample is interpolated from this standard curve.

Product Categories/Family for HVA elisa kit

Cardiovascular

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
