

Monkey Extractable Nuclear Antibody ELISA Kit | ENA elisa kit

Monkey Extractable Nuclear Antibody ELISA Kit

CATALOG #
AAA95212

REACTIVITY
Monkey

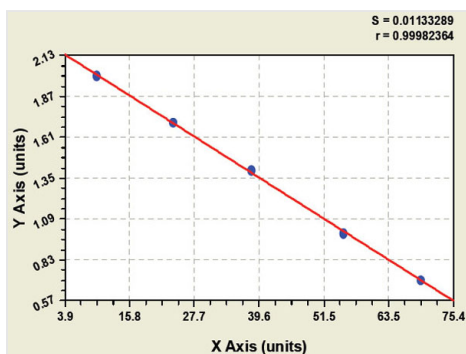

PRODUCT SYNONYMS

Extractable Nuclear Antibody; Monkey Extractable Nuclear Antibody ELISA Kit; ENA elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Monkey
Samples	Serum, plasma, Cell Culture Supernatants, body fluid and tissue homogenate
Assay Type	Competitive
Sensitivity	1.0 ng/mL.
Intended Uses	This ENA ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Monkey ENA. This ELISA kit for research use only, not for therapeutic applications
Preparation and Storage	Store all reagents at 2-8 degree C.

ADDITIONAL INFORMATION

Related Product Information for ENA elisa kit

Principle of the Assay: ENA ELISA kit applies the competitive enzyme immunoassay technique utilizing a monoclonal anti-ENA antibody and an ENA-HRP conjugate. The assay sample and buffer are incubated together with ENA-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the ENA concentration since ENA from samples and ENA-HRP conjugate compete for the anti-ENA antibody binding site. Since the number of sites is limited, as more sites are occupied by ENA from the sample, fewer sites are left to bind ENA-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The ENA concentration in each sample is interpolated from this standard curve.

Product Categories/Family for ENA elisa kit

Immunology

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
