

Porcine Chemokine interferon-inducible protein 8 ELISA Kit | IP-8 elisa kit

Porcine Chemokine interferon-inducible protein 8 ELISA Kit

CATALOG #
AAA95391

REACTIVITY
Porcine

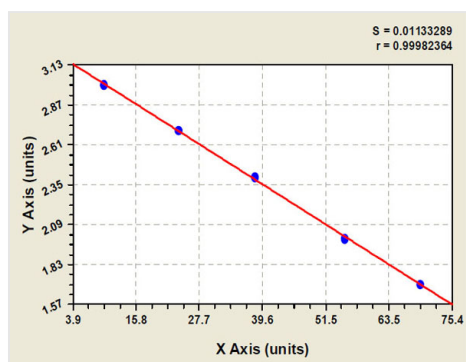

PRODUCT SYNONYMS

Chemokine interferon-inducible protein 8; Porcine Chemokine interferon-inducible protein 8 ELISA Kit; IP-8 elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Porcine
Samples	Serum, plasma, Cell Culture Supernatants, body fluid and tissue homogenate
Assay Type	Competitive
Sensitivity	1.0 pg/mL.
Preparation and Storage	Store all reagents at 2-8 degree C.

ADDITIONAL INFORMATION

Related Product Information for IP-8 elisa kit

Intended Uses: This IP-8 ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Porcine IP-8. This ELISA kit for research use only!

Principle of the Assay: IP-8 ELISA kit applies the competitive enzyme immunoassay technique utilizing a monoclonal anti-IP-8 antibody and an IP-8-HRP conjugate. The assay sample and buffer are incubated together with IP-8-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the IP-8 concentration since IP-8 from samples and IP-8-HRP conjugate compete for the anti-IP-8 antibody binding site. Since the number of sites is limited, as more sites are occupied by IP-8 from the sample, fewer sites are left to bind IP-8-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The IP-8 concentration in each sample is interpolated from this standard curve.

Immunology

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
