

Mouse Opiorphin ELISA Kit | OPI elisa kit

Mouse Opiorphin ELISA Kit

CATALOG #
AAA95396

REACTIVITY
Mouse

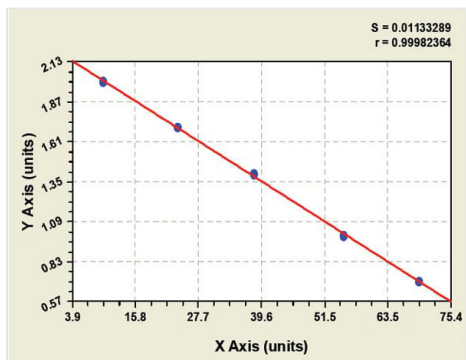

PRODUCT SYNONYMS

Opiorphin; Mouse Opiorphin ELISA Kit; OPI elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Mouse
Samples	Serum, plasma, Cell Culture Supernatants, body fluid and tissue homogenate
Assay Type	Competitive
Detection Range	250-5000pg/mL
Sensitivity	1.0pg/mL
Intended Uses	This OPI ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Mouse OPI. This ELISA kit for research use only, not for therapeutic applications!
Preparation and Storage	Store all reagents at 2-8 degree C.

ADDITIONAL INFORMATION

Related Product Information for OPI elisa kit

Principle of the assay: OPI ELISA kit applies the competitive enzyme immunoassay technique utilizing a monoclonal anti-OPI antibody and an OPI-HRP conjugate. The assay sample and buffer are incubated together with OPI-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the OPI concentration since OPI from samples and OPI-HRP conjugate compete for the anti-OPI antibody binding site. Since the number of sites is limited, as more sites are occupied by OPI from the sample, fewer sites are left to bind OPI-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The OPI concentration in each sample is interpolated from this standard curve.

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
