

Canine Estradiol receptor ELISA Kit | ER elisa kit

Canine Estradiol receptor ELISA Kit

CATALOG #
AAA95446

REACTIVITY
Canine

PRODUCT SYNONYMS

Estradiol receptor; Canine Estradiol receptor ELISA Kit; Canine ER ELISA Kit; ER ELISA Kit; ER elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Canine
Samples	Serum, plasma, cell culture supernatants, body fluid and tissue homogenate
Assay Type	Quantitative Competitive
Sensitivity	0.1 ng/mL
Preparation and Storage	Store all reagents at 2-8 degree C

Intended Uses: This ER ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Canine ER.

Principle of the Assay: ER ELISA kit applies the competitive enzyme immunoassay technique utilizing a Polyclonal anti-ER antibody and an ER-HRP conjugate. The assay sample and buffer are incubated together with ER-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the ER concentration since ER from samples and ER-HRP conjugate compete for the anti-ER antibody binding site. Since the number of sites is limited, as more sites are occupied by ER from the sample, fewer sites are left to bind ER-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The ER concentration in each sample is interpolated from this standard curve.
