

Canine Immunoglobulin G4 ELISA Kit | IgG4 elisa kit

Canine Immunoglobulin G4 ELISA Kit

CATALOG #
AAA95557

REACTIVITY
Canine

PRODUCT SYNONYMS

Immunoglobulin G4; Canine Immunoglobulin G4 ELISA Kit; IgG4 elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Canine
Specificity	This assay has high sensitivity and excellent specificity for detection of IgG4. No significant cross-reactivity or interference between IgG4 and analogues was observed. NOTE: Limited by current skills and knowledge, it is impossible for us to complete the cross-reactivity detection between IgG4 and all the analogues, therefore, cross reaction may still exist in some cases.
Samples	Serum, plasma, cell culture supernatants, body fluid and tissue homogenate
Assay Type	Quantitative Competitive
Sensitivity	0.1 mg/mL
Reactivity Note	No significant cross-reactivity or interference between this antigen and analogues was observed. NOTE: Limited by current skills and knowledge, it is impossible for us to complete the cross-reactivity detection, therefore, cross reaction may still exist in some cases.
Preparation and Storage	Store all reagents at 2-8 degree C.

ADDITIONAL INFORMATION

Related Product Information for IgG4 elisa kit	Intended Uses: This IgG4 ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Canine IgG4. This ELISA kit for research use only! Principle of the Assay: IgG4 ELISA kit applies the competitive enzyme immunoassay technique utilizing an anti-IgG4 antibody and an IgG4-HRP conjugate. The assay sample and buffer are incubated together with IgG4-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the IgG4 concentration since IgG4 from samples and IgG4-HRP conjugate compete for the anti-IgG4 antibody binding site. Since the number of sites is limited, as more sites are occupied by IgG4 from the sample, fewer sites are left to bind IgG4-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The IgG4 concentration in each sample is interpolated from this standard curve.

NCBI AND UNIPROT INFORMATION

NCBI GI #	385843998
NCBI Official Full Name	immunoglobulin G4 heavy chain variable region, partial

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
