

Canine Catecholamine ELISA Kit | CA elisa kit

Canine Catecholamine ELISA Kit

CATALOG #
AAA95566

REACTIVITY
Canine

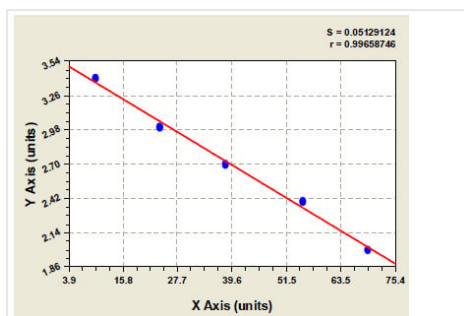

PRODUCT SYNONYMS

Catecholamine; Canine Catecholamine ELISA Kit; CA elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Canine
Samples	Serum, plasma, cell culture supernatants, body fluid and tissue homogenate
Assay Type	Competitive
Sensitivity	1.0 pg/mL.
Preparation and Storage	Store all reagents at 2-8 degree C.

Intended Uses: This Catecholamine ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Canine Catecholamine. This ELISA kit for research use only!

Principle of the Assay||Catecholamine ELISA kit applies the competitive enzyme immunoassay technique utilizing a polyclonal anti-Catecholamine antibody and an Catecholamine-HRP conjugate. The assay sample and buffer are incubated together with Catecholamine-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the Catecholamine concentration since Catecholamine from samples and Catecholamine-HRP conjugate compete for the anti-Catecholamine antibody binding site. Since the number of sites is limited, as more sites are occupied by Catecholamine from the sample, fewer sites are left to bind Catecholamine-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The Catecholamine concentration in each sample is interpolated from this standard curve.

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
