

Goat Phospho protein kinase C ELISA Kit | P-PKC elisa kit

Goat Phospho protein kinase C ELISA Kit

CATALOG #
AAA95683

REACTIVITY
Goat

PRODUCT SYNONYMS

Phospho protein kinase C; Goat Phospho protein kinase C ELISA Kit; P-PKC elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Goat
Samples	Serum, plasma, Cell Culture Supernatants, body fluid and tissue homogenate
Assay Type	Competitive
Sensitivity	1.0 pg/mL.
Preparation and Storage	Store all reagents at 2-8 degree C

ADDITIONAL INFORMATION

Related Product Information for P-PKC elisa kit
Intended Uses: This P-PKC ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Goat P-PKC. This ELISA kit for research use only!

Principle of the Assay: P-PKC ELISA kit applies the competitive enzyme immunoassay technique utilizing a monoclonal anti-P-PKC antibody and an P-PKC-HRP conjugate. The assay sample and buffer are incubated together with P-PKC-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the P-PKC concentration since P-PKC from samples and P-PKC-HRP conjugate compete for the anti-P-PKC antibody binding site. Since the number of sites is limited, as more sites are occupied by P-PKC from the sample, fewer sites are left to bind P-PKC-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The P-PKC concentration in each sample is interpolated from this standard curve.
