

Goat Retinoic acid inducible gene/RIG-like receptor ELISA Kit | RLR-9 elisa kit

Goat Retinoic acid inducible gene/RIG-like receptor ELISA Kit

CATALOG #
AAA95833

REACTIVITY
Goat

PRODUCT SYNONYMS

Retinoic acid inducible gene/RIG-like receptor; Goat Retinoic acid inducible gene/RIG-like receptor ELISA Kit; RLR-9 elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Goat
Samples	Serum, plasma, Cell Culture Supernatants, body fluid and tissue homogenate
Assay Type	Competitive
Sensitivity	1.0 ng/mL.
Preparation and Storage	Store all reagents at 2-8 degree C

Related Product Information for RLR-9 elisa kit

Intended Uses: This RLR-9 ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Goat RLR-9. This ELISA kit for research use only!

Principle of the Assay: RLR-9 ELISA kit applies the competitive enzyme immunoassay technique utilizing a monoclonal anti-RLR-9 antibody and an RLR-9-HRP conjugate. The assay sample and buffer are incubated together with RLR-9-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the RLR-9 concentration since RLR-9 from samples and RLR-9-HRP conjugate compete for the anti-RLR-9 antibody binding site. Since the number of sites is limited, as more sites are occupied by RLR-9 from the sample, fewer sites are left to bind RLR-9-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The RLR-9 concentration in each sample is interpolated from this standard curve.
