

Monkey Phosphorylated tau 181 ELISA Kit | p-Tau181 elisa kit

Monkey Phosphorylated tau 181 ELISA Kit

CATALOG #
AAA95879

REACTIVITY
Monkey

PRODUCT SYNONYMS

Phosphorylated tau 181; Monkey Phosphorylated tau 181 ELISA Kit; p-Tau181 elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Monkey
Samples	Serum, Plasma, Cell Culture Supernatants, Body Fluid And Tissue Homogenate
Assay Type	Quantitative Competitive
Sensitivity	0.1 ng/mL.
Preparation and Storage	Store all reagents at 2-8 degree C.

ADDITIONAL INFORMATION

Related Product Information for p-Tau181 elisa kit

Intended Uses: This PSYK ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Mouse PSYK. This ELISA kit for research use only!

Principle of the Assay: PSYK ELISA kit applies the competitive enzyme immunoassay technique utilizing a polyclonal anti-PSYK antibody and an PSYK-HRP conjugate. The assay sample and buffer are incubated together with PSYK-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the PSYK concentration since PSYK from samples and PSYK-HRP conjugate compete for the anti-PSYK antibody binding site. Since the number of sites is limited, as more sites are occupied by PSYK from the sample, fewer sites are left to bind PSYK-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The PSYK concentration in each sample is interpolated from this standard curve.

Product Categories/Family for p-Tau181 elisa kit

Cardiovascular

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
