

Mouse UDP-glucuronosyltransferase ELISA Kit | UDPGT elisa kit

Mouse UDP-glucuronosyltransferase ELISA Kit

CATALOG #
AAA95882

REACTIVITY
Mouse

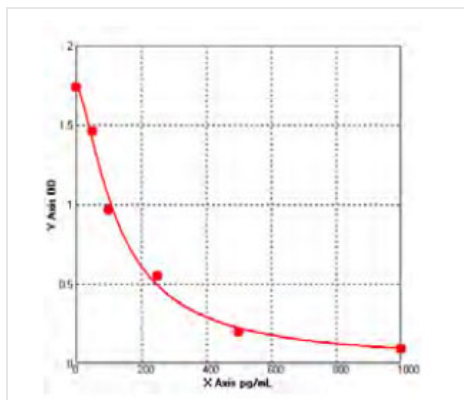

PRODUCT SYNONYMS

UDP-glucuronosyltransferase; Mouse UDP-glucuronosyltransferase ELISA Kit; UDPGT elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Mouse
Specificity	This assay has high sensitivity and excellent specificity for detection of UGT. No significant cross-reactivity or interference between UGT and analogues was observed. NOTE: Limited by current skills and knowledge, it is impossible for us to complete the cross-reactivity detection between UGT and all the analogues, therefore, cross reaction may still exist in some cases.
Assay Type	Quantitative Competitive
Samples	Serum, plasma, cell culture supernatants, body fluid and tissue homogenate
Sensitivity	1.0 pg/mL
Preparation and Storage	Store all reagents at 2-8 degree C.

ADDITIONAL INFORMATION

Related Product Information for UDPGT elisa kit	Principle of the Assay: UGT ELISA kit applies the competitive enzyme immunoassay technique utilizing an anti-UGT antibody and an UGT-HRP conjugate. The assay sample and buffer are incubated together with UGT-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the UGT concentration since UGT from samples and UGT-HRP conjugate compete for the anti-UGT antibody binding site. Since the number of sites is limited, as more sites are occupied by UGT from the sample, fewer sites are left to bind UGT-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The UGT concentration in each sample is interpolated from this standard curve. Intended Uses: This UGT ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Mouse UGT. This ELISA kit for research use only, not for therapeutic or test applications!
