

Goat Oxidized Glutathione ELISA Kit | GSSG elisa kit

Goat Oxidized Glutathione ELISA Kit

CATALOG #
AAA95991

REACTIVITY
Goat

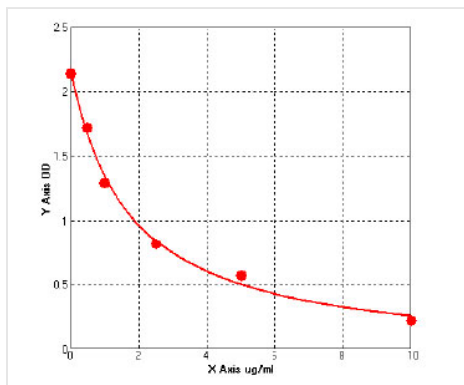

PRODUCT SYNONYMS

Oxidized Glutathione; Goat Oxidized Glutathione ELISA Kit; GSSG elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Goat
Specificity	This assay has high sensitivity and excellent specificity for detection of GSSG. No significant cross-reactivity or interference between GSSG and analogues was observed. NOTE: Limited by current skills and knowledge, it is impossible for us to complete the cross-reactivity detection between GSSG and all the analogues, therefore, cross reaction may still exist in some cases.
Samples	Serum, plasma, cell culture supernatants, body fluid and tissue homogenate
Assay Type	Quantitative Competitive
Sensitivity	0.1 ug/mL
Preparation and Storage	Store all reagents at 2-8 degree C

ADDITIONAL INFORMATION

Related Product Information for GSSG elisa kit	Intended Uses: This GSSG ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Goat GSSG. This ELISA kit for research use only, not for therapeutic or test applications! Principle of the Assay: GSSG ELISA kit applies the competitive enzyme immunoassay technique utilizing a polyclonal anti-GSSG antibody and an GSSG-HRP conjugate. The assay sample and buffer are incubated together with GSSG-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the GSSG concentration since GSSG from samples and GSSG-HRP conjugate compete for the anti-GSSG antibody binding site. Since the number of sites is limited, as more sites are occupied by GSSG from the sample, fewer sites are left to bind GSSG-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The GSSG concentration in each sample is interpolated from this standard curve.
Product Categories/Family for GSSG elisa kit	Metabolism

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
