

Monkey Phosphorylated tau 231 ELISA Kit | p-Tau231 elisa kit

Monkey Phosphorylated tau 231 ELISA Kit

CATALOG #
AAA95992

REACTIVITY
Monkey

PRODUCT SYNONYMS

Phosphorylated tau 231; Monkey Phosphorylated tau 231 ELISA Kit; p-Tau231 elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Monkey
Samples	Serum, Plasma, Cell Culture Supernatants, Body Fluid And Tissue Homogenate
Assay Type	Quantitative Competitive
Sensitivity	1.0 pg/mL.
Preparation and Storage	Store all reagents at 2-8 degree C.

Intended Uses: This p-tau 181 ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Monkey p-tau 181. This ELISA kit for research use only!

Principle of the Assay: p-tau 181 ELISA kit applies the competitive enzyme immunoassay technique utilizing a polyclonal anti-p-tau 181 antibody and an p-tau 181-HRP conjugate. The assay sample and buffer are incubated together with p-tau 181-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the p-tau 181 concentration since p-tau 181 from samples and p-tau 181-HRP conjugate compete for the anti-p-tau 181 antibody binding site. Since the number of sites is limited, as more sites are occupied by p-tau 181 from the sample, fewer sites are left to bind p-tau 181-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The p-tau 181 concentration in each sample is interpolated from this standard curve.

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
