

Rabbit Soluble transferrin receptor ELISA Kit | sTfR elisa kit

Rabbit Soluble transferrin receptor ELISA Kit

CATALOG #
AAA96290

REACTIVITY
Rabbit

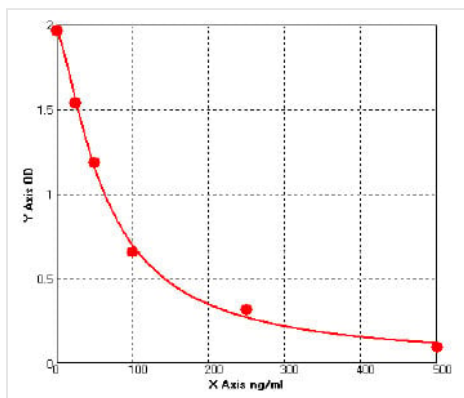

PRODUCT SYNONYMS

Soluble transferrin receptor; Rabbit Soluble transferrin receptor ELISA Kit; sTfR elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Rabbit
Specificity	This assay has high sensitivity and excellent specificity for detection of sTfR. No significant cross-reactivity or interference between sTfR and analogues was observed. NOTE: Limited by current skills and knowledge, it is impossible for us to complete the cross-reactivity detection between sTfR and all the analogues, therefore, cross reaction may still exist in some cases.
Assay Type	Quantitative Competitive
Samples	Serum, plasma, cell culture supernatants, body fluid and tissue homogenate
Sensitivity	1.0 ng/mL
Intended Uses	This sTfR ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Rabbit sTfR. This ELISA kit for research use only, not for therapeutic applications
Intended Uses	This sTfR ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Rabbit sTfR. This ELISA kit for research use only, not for therapeutic applications!
Preparation and Storage	Store all reagents at 2-8 degree C.

ADDITIONAL INFORMATION

Related Product Information for sTfR elisa kit	Principle of the Assay: sTfR ELISA kit applies the competitive enzyme immunoassay technique utilizing a polyclonal anti-sTfR antibody and an sTfR-HRP conjugate. The assay sample and buffer are incubated together with sTfR-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the sTfR concentration since sTfR from samples and sTfR-HRP conjugate compete for the anti-sTfR antibody binding site. Since the number of sites is limited, as more sites are occupied by sTfR from the sample, fewer sites are left to bind sTfR-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The sTfR concentration in each sample is interpolated from this standard curve. Intended Uses: This sTfR ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Rabbit sTfR. This ELISA kit for research use only, not for therapeutic or test applications!
Product Categories/Family for sTfR elisa kit	Signal Transduction

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
