

Mouse Platelet antibodies IgG ELISA Kit | PA-IgG elisa kit

Mouse Platelet antibodies IgG ELISA Kit

CATALOG #
AAA96534

REACTIVITY
Mouse

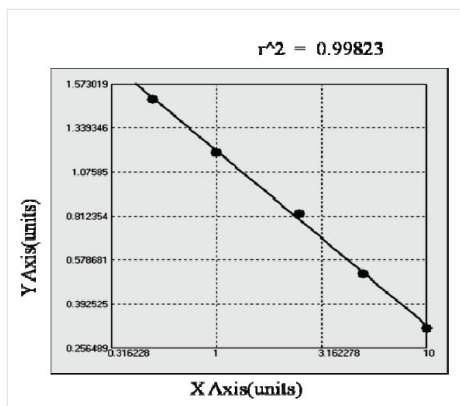

PRODUCT SYNONYMS

Platelet antibodies IgG; Mouse Platelet antibodies IgG ELISA Kit; PA-IgG elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Mouse
Samples	Serum, plasma, Cell Culture Supernatants, body fluid and tissue homogenate
Assay Type	Competitive
Detection Range	10-250ng/mL
Sensitivity	1.0ng/mL
Intended Uses	This PA-IgG ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Mouse PA-IgG. This ELISA kit for research use only, not for therapeutic applications
!Intended Uses	This PA-IgG ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Mouse PA-IgG. This ELISA kit for research use only, not for therapeutic applications!
Preparation and Storage	Store all reagents at 2-8 degree C.

ADDITIONAL INFORMATION

Related Product Information for PA-IgG elisa kit	Principle of the Assay: PA-IgG ELISA kit applies the competitive enzyme immunoassay technique utilizing a monoclonal anti-PA-IgG antibody and an PA-IgG-HRP conjugate. The assay sample and buffer are incubated together with PA-IgG-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the PA-IgG concentration since PA-IgG from samples and PA-IgG-HRP conjugate compete for the anti-PA-IgG antibody binding site. Since the number of sites is limited, as more sites are occupied by PA-IgG from the sample, fewer sites are left to bind PA-IgG-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The PA-IgG concentration in each sample is interpolated from this standard curve.
---	---

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
