

Bovine D-Dimer ELISA Kit | D2D elisa kit

Bovine D-Dimer ELISA Kit

CATALOG #
AAA96596

REACTIVITY
Bovine

PRODUCT SYNONYMS

D-Dimer; Bovine D-Dimer ELISA Kit; D2D elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Bovine
Samples	Serum, plasma, Cell Culture Supernatants, body fluid and tissue homogenate
Assay Type	Competitive
Detection Range	0.5-10ug/mL
Sensitivity	0.1ug/mL
Preparation and Storage	Store all reagents at 2-8 degree C.

Related Product Information for D2D elisa kit

Principle of the assay: D2D ELISA kit applies the competitive enzyme immunoassay technique utilizing a monoclonal anti-D2D antibody and an D2D-HRP conjugate. The assay sample and buffer are incubated together with D2D-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the D2D concentration since D2D from samples and D2D-HRP conjugate compete for the anti-D2D antibody binding site. Since the number of sites is limited, as more sites are occupied by D2D from the sample, fewer sites are left to bind D2D-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The D2D concentration in each sample is interpolated from this standard curve.

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
