

Monkey Carboxylated Osteocalcin ELISA Kit | cOC elisa kit

Monkey Carboxylated Osteocalcin ELISA Kit

CATALOG #
AAA96932

REACTIVITY
Monkey

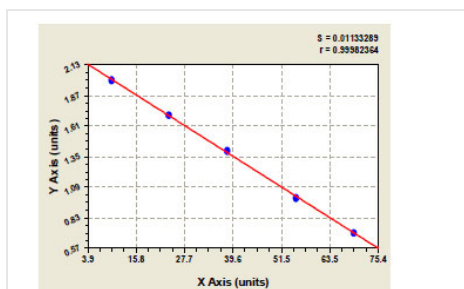

PRODUCT SYNONYMS

Carboxylated Osteocalcin; Monkey Carboxylated Osteocalcin ELISA Kit; cOC elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Monkey
Samples	Serum, plasma, cell culture supernatants, body fluid and tissue homogenate
Assay Type	Competitive
Sensitivity	1.0 ng/mL
Preparation and Storage	Store all reagents at 2-8 degree C.

ADDITIONAL INFORMATION

Related Product Information for cOC elisa kit

Intended Uses: This COC ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Monkey COC. This ELISA kit for research use only!

Principle of the Assay: COC ELISA kit applies the competitive enzyme immunoassay technique utilizing a Polyclonal anti-COC antibody and an COC-HRP conjugate. The assay sample and buffer are incubated together with COC-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the COC concentration since COC from samples and COC-HRP conjugate compete for the anti-COC antibody binding site. Since the number of sites is limited, as more sites are occupied by COC from the sample, fewer sites are left to bind COC-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The COC concentration in each sample is interpolated from this standard curve.
