

## Porcine Cell division cycle gene ELISA Kit | CDC elisa kit

Porcine Cell division cycle gene ELISA Kit

CATALOG #  
**AAA96987**

REACTIVITY  
**Porcine**

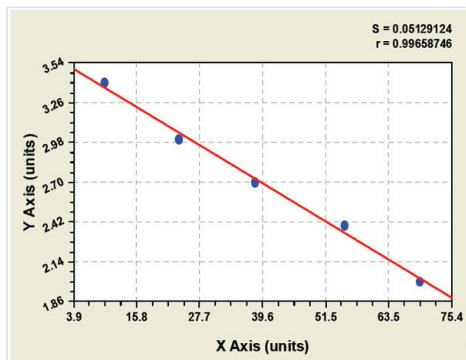

### PRODUCT SYNONYMS

Cell division cycle gene; Porcine Cell division cycle gene ELISA Kit; CDC elisa kit

### PRODUCT SPECIFICATIONS

|                         |                                                                                                                                                                                        |

### ADDITIONAL INFORMATION

#### Related Product Information for CDC elisa kit

**Principle of the Assay:** CDC ELISA kit applies the competitive enzyme immunoassay technique utilizing a monoclonal anti-CDC antibody and an CDC-HRP conjugate. The assay sample and buffer are incubated together with CDC-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the CDC concentration since CDC from samples and CDC-HRP conjugate compete for the anti-CDC antibody binding site. Since the number of sites is limited, as more sites are occupied by CDC from the sample, fewer sites are left to bind CDC-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The CDC concentration in each sample is interpolated from this standard curve.
