ADDITIONAL INFORMATION

Related Product Information for ACTN3 elisa kit	Principle of the Assay: ACTN3 ELISA kit applies the competitive enzyme immunoassay technique utilizing a monoclonal anti-ACTN3 antibody and an ACTN3-HRP conjugate. The assay sample and buffer are incubated together with ACTN3-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the ACTN3 concentration since ACTN3 from samples and ACTN3-HRP conjugate compete for the anti-ACTN3 antibody binding site. Since the number of sites is limited, as more sites are occupied by ACTN3 from the sample, fewer sites are left to bind ACTN3-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The ACTN3 concentration in each sample is interpolated from this standard curve.
