

Goat Malonyl CoA ELISA Kit

Goat Malonyl CoA ELISA Kit

CATALOG #
AAA97500

REACTIVITY
Goat

PRODUCT SYNONYMS

Malonyl CoA; Goat Malonyl CoA ELISA Kit; Malonyl CoA elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Goat
Samples	Serum, plasma, cell culture supernatants, body fluid and tissue homogenate
Assay Type	Competitive (Quantitative)
Sensitivity	1.0 ng/mL.
Preparation and Storage	Store all reagents at 2-8 degree C

Related Product Information for Malonyl CoA elisa kit

Intended Uses: This M-COA ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Goat M-COA. This ELISA kit for research use only!

Principle of the Assay: M-COA ELISA kit applies the competitive enzyme immunoassay technique utilizing a monoclonal anti-M-COA antibody and an M-COA-HRP conjugate. The assay sample and buffer are incubated together with M-COA-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the M-COA concentration since M-COA from samples and M-COA-HRP conjugate compete for the anti-M-COA antibody binding site. Since the number of sites is limited, as more sites are occupied by M-COA from the sample, fewer sites are left to bind M-COA-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The M-COA concentration in each sample is interpolated from this standard curve.

Metabolism

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
