Principle of the assay: MAP3K15 ELISA kit applies the competitive enzyme immunoassay technique utilizing a monoclonal anti-MAP3K15 antibody and an MAP3K15-HRP conjugate. The assay sample and buffer are incubated together with MAP3K15-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the MAP3K15 concentration since MAP3K15 from samples and MAP3K15-HRP conjugate compete for the anti-MAP3K15 antibody binding site. Since the number of sites is limited, as more sites are occupied by MAP3K15 from the sample, fewer sites are left to bind MAP3K15-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The MAP3K15 concentration in each sample is interpolated from this standard curve.

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
