

Fish 11-Deoxycortisol ELISA Kit

Fish 11-Deoxycortisol ELISA Kit

CATALOG #
AAA97632

REACTIVITY
Fish

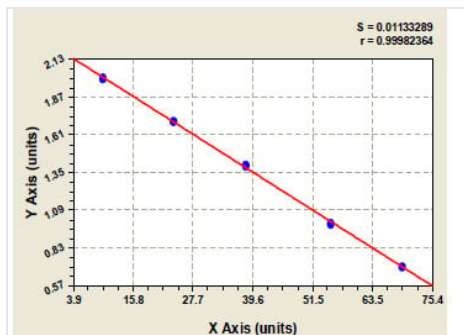

PRODUCT SYNONYMS

11-Deoxycortisol; Fish 11-Deoxycortisol ELISA Kit; 11-Deoxycortisol elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Fish
Specificity	This assay has high sensitivity and excellent specificity for detection of 11-Deoxycortisol. No significant cross-reactivity or interference between 11-Deoxycortisol and analogues was observed. NOTE: Limited by current skills and knowledge, it is impossible for us to complete the cross-reactivity detection between 11-Deoxycortisol and all the analogues, therefore, cross reaction may still exist in some cases.
Samples	Serum, plasma, cell culture supernatants, body fluid and tissue homogenate
Assay Type	Quantitative Competitive
Sensitivity	1.0 ng/mL
Preparation and Storage	Store all reagents at 2-8 degree C.

ADDITIONAL INFORMATION

Related Product Information for 11-Deoxycortisol elisa kit	Intended Uses: This 11-Deoxycortisol ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Fish 11-Deoxycortisol. This ELISA kit for research use only, not for therapeutic or test applications! Principle of the Assay: 11-Deoxycortisol ELISA kit applies the competitive enzyme immunoassay technique utilizing a monoclonal anti-11-Deoxycortisol antibody and an 11-Deoxycortisol-HRP conjugate. The assay sample and buffer are incubated together with 11-Deoxycortisol-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the 11-Deoxycortisol concentration since 11-Deoxycortisol from samples and 11-Deoxycortisol-HRP conjugate compete for the anti-11-Deoxycortisol antibody binding site. Since the number of sites is limited, as more sites are occupied by 11-Deoxycortisol from the sample, fewer sites are left to bind 11-Deoxycortisol-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The 11-Deoxycortisol concentration in each sample is interpolated from this standard curve.
--	---

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
