

Hamster Neogenin ELISA Kit

Hamster Neogenin ELISA Kit

CATALOG #
AAA97634

REACTIVITY
Hamster

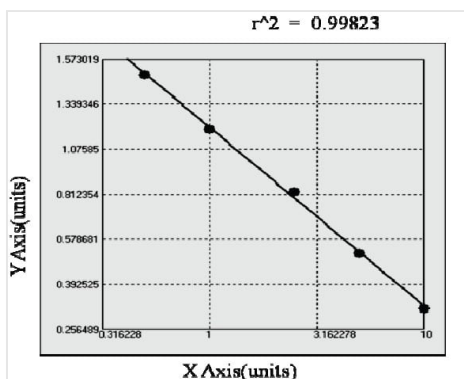

PRODUCT SYNONYMS

Neogenin; Hamster Neogenin ELISA Kit; Neogenin elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Hamster
Samples	Serum, plasma, Cell Culture Supernatants, body fluid and tissue homogenate
Assay Type	Competitive
Sensitivity	0.1 ng/mL.
Intended Uses	This Neogenin ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Hamster Neogenin. This ELISA kit for research use only, not for therapeutic applications!
Preparation and Storage	Store all reagents at 2-8 degree C.

ADDITIONAL INFORMATION

Related Product Information for Neogenin elisa kit

Principle of the assay: Neogenin ELISA kit applies the competitive enzyme immunoassay technique utilizing a monoclonal anti-Neogenin antibody and an Neogenin-HRP conjugate. The assay sample and buffer are incubated together with Neogenin-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the Neogenin concentration since Neogenin from samples and Neogenin-HRP conjugate compete for the anti-Neogenin antibody binding site. Since the number of sites is limited, as more sites are occupied by Neogenin from the sample, fewer sites are left to bind Neogenin-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The Neogenin concentration in each sample is interpolated from this standard curve.

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
