

Human Interleukin-28B ELISA Kit | IL28B elisa kit

Human Interleukin-28B ELISA Kit

CATALOG #
AAA97901

REACTIVITY
Human

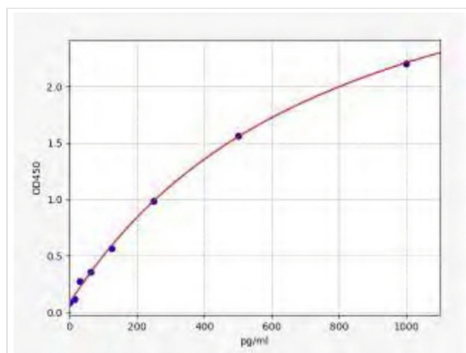

PRODUCT SYNONYMS

Interleukin-28B; Human Interleukin-28B ELISA Kit; IL28B (Interleukin-28B)/IL-28B/Interleukin-28C/IL-28C/Interferon lambda-4/IFN-lambda-4/Cytokine Zcyto22/Interferon lambda-3/IFN-lambda-3/IL28C/IL-28B/interferon; lambda 3; IL28B elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Human
Specificity	Specifically recognize IL28B, no obvious cross reaction with other analogues
Assay Type	Sandwich
Samples	Serum, plasma, cell culture supernatant and other biological samples
Intra-assay Precision	Intra-assay Precision: samples with low, medium and high concentration are tested 20 times on same plate.
Inter-assay Precision	Inter-assay Precision: samples with low, medium and high concentration are tested 20 times on three different plates.
Preparation and Storage	Store entire kit at 2-8C for short-term. For longer-term, please store the microplate & standard at -20C, while the remaining reagents can be stored at 2-8C

ADDITIONAL INFORMATION

Related Product Information for IL28B elisa kit	Background: Interleukin-28B (IL-28B), also known as interferon lambda-3 (IFN-lambda3), is a cytokine belonging to the type III interferon family. It plays a role in antiviral defense, immune regulation, and inflammatory responses. IL-28B induces an antiviral state in infected cells and activates immune cells to combat viral infections. Polymorphisms in the IL28B gene are associated with variations in host susceptibility to viral hepatitis and response to antiviral therapy. Principle of the Assay: This kit was based on sandwich enzyme-linked immune-sorbent assay technology. Anti IL28B antibody was precoated onto the 96-well plate. The biotin conjugated anti IL28B antibody was used as the detection antibody. The standards and pilot samples were added to the wells subsequently. After incubation, unbound conjugates were removed by wash buffer. Then, biotinylated detection antibody was added to bind with IL28B conjugated on coated antibody. After washing off unbound conjugates, HRP-Streptavidin was added. After a third washing, TMB substrates were added to visualize HRP enzymatic reaction. TMB was catalyzed by HRP to produce a blue color product that turned yellow after adding a stop solution. Read the O.D. absorbance at 450nm in a microplate reader. The concentration of IL28B in the sample was calculated by drawing a standard curve. The concentration of the target substance is proportional to the OD450 value.
