

## Human Neprilysin ELISA Kit | MME elisa kit

Human Neprilysin ELISA Kit

CATALOG #  
**AAA97932**

REACTIVITY  
**Human**

### PRODUCT SYNONYMS

Neprilysin; Human Neprilysin ELISA Kit; Neprilysin/CD10; MME elisa kit

### PRODUCT SPECIFICATIONS

|                         |                                                                                                                                                                                                          |
|-------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Reactivity              | Human                                                                                                                                                                                                    |
| Specificity             | This assay has high sensitivity and excellent specificity for detection of MME. No significant cross-reactivity or interference between MME and analogues was observed.                                  |
| Sequence Length         | 750                                                                                                                                                                                                      |
| Assay Type              | Sandwich ELISA, Double Antibody                                                                                                                                                                          |
| Samples                 | Serum, Plasma, Cell Culture Supernatant, cell or tissue lysate, Other liquid samples                                                                                                                     |
| Detection Range         | 0.156-10ng/ml                                                                                                                                                                                            |
| Sensitivity             | 0.094ng/ml                                                                                                                                                                                               |
| Intra-assay Precision   | Intra-assay Precision (Precision within an assay): 3 samples with low, middle and high level MME were tested 20 times on one plate, respectively. Intra-Assay: CV<8%                                     |
| Inter-assay Precision   | Inter-assay Precision (Precision between assays): 3 samples with low, middle and high level MME were tested on 3 different plates, 8 replicates in each plate. CV (%) = SD/meanX100. Inter-Assay: CV<10% |
| Preparation and Storage | Store entire kit at 2-8C for short-term. For longer-term, please store the microplate & standard at -20C, while the remaining reagents can be stored at 2-8C                                             |

### ADDITIONAL INFORMATION

#### Related Product Information for MME elisa kit

Principle of the Assay: This kit was based on sandwich enzyme-linked immune-sorbent assay technology. Anti-MME antibody was pre-coated onto 96-well plates. And the biotin conjugated anti- MME antibody was used as detection antibodies. The standards, test samples and biotin conjugated detection antibody were added to the wells subsequently, and washed with wash buffer. HRPStreptavidin was added and unbound conjugates were washed away with wash buffer. TMB substrates were used to visualize HRP enzymatic reaction. TMB was catalyzed by HRP to produce a blue color product that changed into yellow after adding acidic stop solution. The density of yellow is proportional to the MME amount of sample captured in plate. Read the O.D. absorbance at 450nm in a microplate reader, and then the concentration of MME can be calculated.
