

## Human Netrin receptor UNC5C ELISA Kit | UNC5C elisa kit

Human Netrin receptor UNC5C ELISA Kit

CATALOG #  
**AAA98608**

REACTIVITY  
**Human**

### PRODUCT SYNONYMS

Netrin receptor UNC5C; Human Netrin receptor UNC5C ELISA Kit; UNC5C/UNC5H3/netrin receptor UNC5C/Protein unc-5 homolog 3/Protein unc-5 homolog C/unc-5 homolog 3/unc-5 homolog C (C. elegans)/UNC5H3unc5 (C.elegans homolog) c; UNC5C elisa kit

### PRODUCT SPECIFICATIONS

|                         |                                                                                                                                                                                                           |
|-------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Reactivity              | Human                                                                                                                                                                                                     |
| Specificity             | This assay has high sensitivity and excellent specificity for detection of UMOD. No significant cross-reactivity or interference between UMOD and analogues was observed.                                 |
| Sequence Length         | 931                                                                                                                                                                                                       |
| Assay Type              | Sandwich ELISA, Double Antibody                                                                                                                                                                           |
| Samples                 | Serum, Plasma, Cell Culture Supernatant, cell or tissue lysate, Other liquid samples                                                                                                                      |
| Detection Range         | 0.156-10ng/ml                                                                                                                                                                                             |
| Sensitivity             | 0.094ng/ml                                                                                                                                                                                                |
| Intra-assay Precision   | Intra-assay Precision (Precision within an assay): 3 samples with low, middle and high level UMOD were tested 20 times on one plate, respectively. Intra-Assay: CV<8%                                     |
| Inter-assay Precision   | Inter-assay Precision (Precision between assays): 3 samples with low, middle and high level UMOD were tested on 3 different plates, 8 replicates in each plate. CV (%) = SD/meanX100. Inter-Assay: CV<10% |
| Preparation and Storage | Store entire kit at 2-8C for short-term. For longer-term, please store the microplate & standard at -20C, while the remaining reagents can be stored at 2-8C                                              |

#### Typical Data & Standard Curve

Results of a typical standard run of a UNC5C ELISA Kit are shown below. This standard curve was generated at our lab for demonstration purpose only. Each user should obtain their own standard curve as per experiment. (N/A-not applicable)

|   |       |       |       |       |       |       |       |       |       |

### ADDITIONAL INFORMATION

#### Related Product Information for UNC5C elisa kit

Principle of the Assay: This kit was based on sandwich enzyme-linked immune-sorbent assay technology. Anti-UMOD antibody was pre-coated onto 96-well plates. And the biotin conjugated anti-UMOD antibody was used as detection antibodies. The standards, test samples and biotin conjugated detection antibody were added to the wells subsequently, and washed with wash buffer. HRP-Streptavidin was added and unbound conjugates were washed away with wash buffer. TMB substrates were used to visualize HRP enzymatic reaction. TMB was catalyzed by HRP to produce a blue color product that changed into yellow after adding acidic stop solution. The density of yellow is proportional to the UMOD amount of sample captured in plate. Read the O.D. absorbance at 450nm in a microplate reader, and then the concentration of UMOD can be calculated.
