PRODUCT SYNONYMS

Guanine nucleotide exchange factor VAV3; Human Guanine nucleotide exchange factor VAV3 ELISA Kit; VAV3 (Guanine nucleotide exchange factor VAV3)/VAV-3; VAV3 elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Human
Specificity	This assay has high sensitivity and excellent specificity for detection of VAV3 . No significant cross-reactivity or interference between VAV3 and analogues was observed. Note: Limited by current skills and knowledge, it is difficult for us to complete the crossreactivity detection between VAV3 and all the analogues, therefore, cross reaction may still exist.

Principle of the Assay: This kit was based on sandwich enzyme-linked immune-sorbent assay technology. Anti-VAV3 antibody was pre-coated onto 96-well plates. And the biotin conjugated anti- VAV3 antibody was used as detection antibodies. The standards, test samples and biotin conjugated detection antibody were added to the wells subsequently, and washed with wash buffer. HRPStreptavidin was added and unbound conjugates were washed away with wash buffer. TMB substrates were used to visualize HRP enzymatic reaction. TMB was catalyzed by HRP to produce a blue color product that changed into yellow after adding acidic stop solution. The density of yellow is proportional to the VAV3 amount of sample captured in plate. Read the O.D. absorbance at 450nm in a microplate reader, and then the concentration of VAV3 can be calculated.
