

## Human Histo-blood group ABO system transferase ELISA Kit | ABO elisa kit

Human Histo-blood group ABO system transferase ELISA Kit

CATALOG #  
**AAA99880**

REACTIVITY  
**Human**

### PRODUCT SYNONYMS

Histo-blood group ABO system transferase; Human Histo-blood group ABO system transferase ELISA Kit; ABO/Histo-blood group B transferase (B transferase)/Histo-blood group A transferase (A transferase)/Glycoprotein-fucosylgalactoside alpha-galactosyltransferase)/Glycoprotein-fucosylgalactoside alpha-N-acetylglactosaminytransferase)/NAGAT/Fucosylglycoprotein 3-alpha-galactosyltransferase/Fucosylglycoprotein alpha-N-acetylglactosaminytransferase; ABO elisa kit

### PRODUCT SPECIFICATIONS

|                         |                                                                                                                                                                                                          |
|-------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Reactivity              | Human                                                                                                                                                                                                    |
| Specificity             | This assay has high sensitivity and excellent specificity for detection of A2M. No significant cross-reactivity or interference between A2M and analogues was observed.                                  |
| Sequence Length         | 354                                                                                                                                                                                                      |
| Assay Type              | Sandwich ELISA, Double Antibody                                                                                                                                                                          |
| Samples                 | Serum, Plasma, Cell Culture Supernatant, cell or tissue lysate, Other liquid samples                                                                                                                     |
| Detection Range         | 0.156-10ng/ml                                                                                                                                                                                            |
| Sensitivity             | 0.094ng/ml                                                                                                                                                                                               |
| Intra-assay Precision   | Intra-assay Precision (Precision within an assay): 3 samples with low, middle and high level A2M were tested 20 times on one plate, respectively. Intra-Assay: CV<8%                                     |
| Inter-assay Precision   | Inter-assay Precision (Precision between assays): 3 samples with low, middle and high level A2M were tested on 3 different plates, 8 replicates in each plate. CV (%) = SD/meanX100. Inter-Assay: CV<10% |
| Preparation and Storage | Store entire kit at 2-8C for short-term. For longer-term, please store the microplate & standard at -20C, while the remaining reagents can be stored at 2-8C                                             |

#### Typical Data & Standard Curve

Results of a typical standard operation of a ABO ELISA Kit are listed below. This standard curve was generated at our lab for demonstration purpose only. Users shall obtain standard curve as per experiment by themselves. (N/A/not applicable)

| X | ng/ml | 0     | 0.156 | 0.312 | 0.625 | 1.25  | 2.5   | 5     | 10    |
|---|-------|-------|-------|-------|-------|-------|-------|-------|-------|
| Y | OD450 | 0.129 | 0.312 | 0.495 | 0.723 | 1.165 | 1.632 | 1.919 | 2.292 |

### ADDITIONAL INFORMATION

#### Related Product Information for ABO elisa kit

Principle of the Assay: This kit was based on sandwich enzyme-linked immune-sorbent assay technology. Anti-A2M antibody was pre-coated onto 96-well plates. And the biotin conjugated anti-A2M antibody was used as detection antibodies. The standards, test samples and biotin conjugated detection antibody were added to the wells subsequently, and washed with wash buffer. HRP-Streptavidin was added and unbound conjugates were washed away with wash buffer. TMB substrates were used to visualize HRP enzymatic reaction. TMB was catalyzed by HRP to produce a blue color product that changed into yellow after adding acidic stop solution. The density of yellow is proportional to the A2M amount of sample captured in plate. Read the O.D. absorbance at 450nm in a microplate reader, and then the concentration of A2M can be calculated.
